

Getting Started

• Environment Requirement

- **Web UI testing:** Check [this list](#) for all supported browsers.
- **Mobile testing:** Please refer to the [Installation Guide](#) for more details.

• Activate Katalon Studio

To start Katalon Studio, double-click on the **katalon.exe** (Microsoft Windows) or **katalon** (Mac) file in the directory where you unpack Katalon Studio. For example:

config	7/21/2015 11:26 AM	File folder	
configuration	7/21/2015 11:25 AM	File folder	
features	7/21/2015 11:23 AM	File folder	
p2	7/21/2015 11:23 AM	File folder	
plugins	7/21/2015 11:25 AM	File folder	
artifacts	7/20/2015 3:30 PM	XML Document	51 KB
eclipsec	7/20/2015 3:29 PM	Application	18 KB
katalon	7/20/2015 3:29 PM	Application	306 KB
katalon	7/20/2015 3:30 PM	Configuration sett...	1 KB

Once started, the application should display the splash screen similar to the following screenshot:

After launching Katalon Studio, provide your registered username and password to activate your Katalon Studio. The username and password are the same as the ones you created when registering and downloading Katalon Studio from <https://www.katalon.com/>.

Please use your registered email and password from Katalon website to activate.

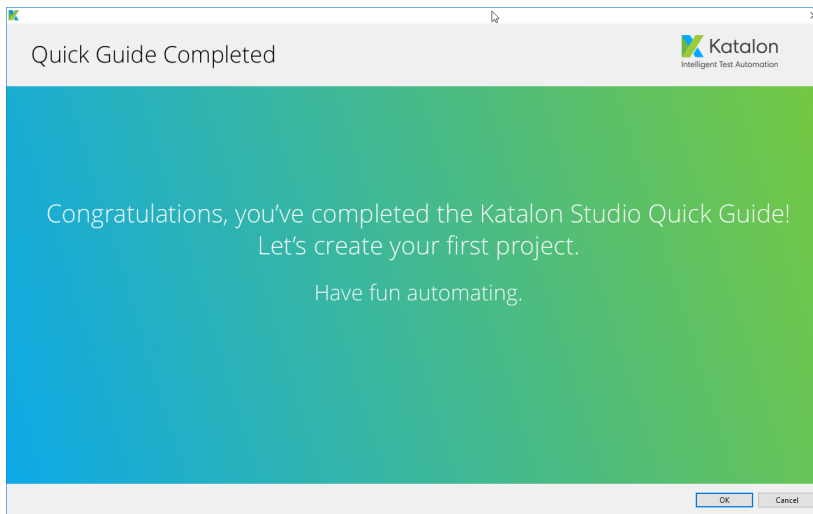

Clear Activate [Forgot Password?](#) | [Register](#) | [Offline Activation](#) | [Config Proxy](#)

When your build is activated, the **Quick Guide** screen is displayed to guide you through all major features. You can skip this and view the Quick Guide later from the **Help** menu.

- Environment Requirement
- Activate Katalon Studio
- Create Your First Project
- Create Your First Test Case
- Execute Your First Test Case
- View Test Execution
- Need Extra Help?
- Uninstall and Upgrade

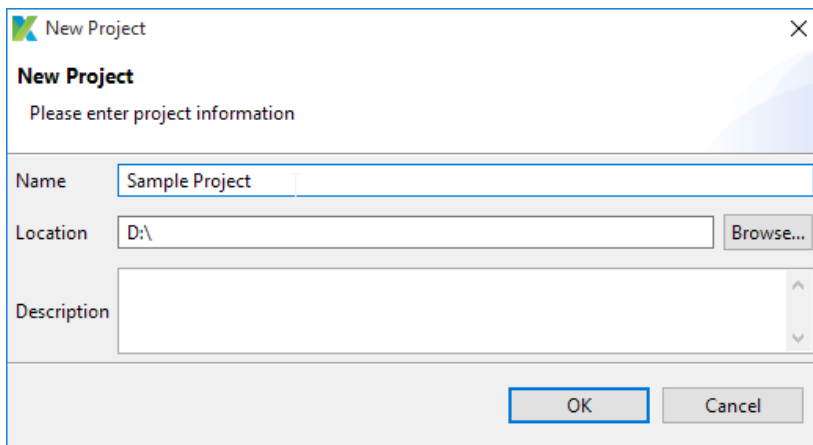

At the end of the introduction, Katalon Studio suggests to create a new project. Click **O** **K** for now:

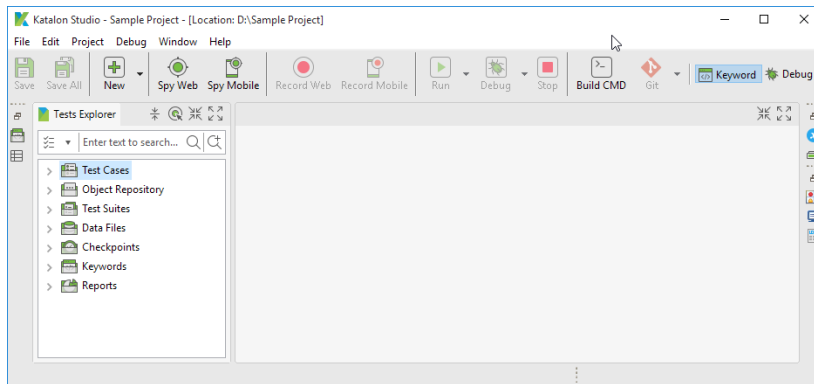

• Create Your First Project

Enter the name of your new project and the location to store the project data on your machine. Click **OK**.

A new project will be generated at the specified location.

• Create Your First Test Case

After new project is created, you can create a new test case with few clicks by using Katalon Studio **Record and Playback** feature.

- [Record and Playback Tutorial](#)

You can also create a new test case manually either in **Manual Mode** or **Script Mode**.

- [Manual Mode Tutorial](#)
- [Script Mode Tutorial](#)

• Execute Your First Test Case

Katalon Studio supports executing test automation in multiple environments, allowing testers to validate their tests across browsers/platforms. This [tutorial](#) will walk you through the steps.

• View Test Execution

Once your test cases/test suites finish execution, you can review the results on the **Log Viewer** views. Katalon Studio has prepared this [tutorial](#) to show you how to navigate around.

• Need Extra Help?

- [Visit Katalon Tutorials Center](#)
- [Visit Katalon Resources Center](#)
- [Visit Katalon Studio Forum](#)
- [Visit Katalon Studio Video Center](#)

• Uninstall and Upgrade

Uninstall

- Simply remove/delete Katalon Studio folder from your Operating Systems.

Upgrade

- Katalon Studio allows users to run multiple versions independently. You can download and run new release version parallel with previous version.
- To keep setting from previous version
 - Katalon Studio version 5.0 and later, refer to this [guide](#)
 - Katalon Studio below version 5.0, copy **Config** folder and paste into Katalon Studio new version folder.
